

## **Our Approach to Environmental Control**

To achieve the above environmental policy, we shall:

- (a) Adopt cost-effective measures to abate greenhouse gas emissions and minimise the environmental impact of any new development;
- (b) Embrace the principles of waste minimisation and pollution control at source;
- (c) Promote the efficient use of energy, materials and natural resources;
- (d) Protect the natural environment in all our operations in a socially responsible manner;
- (e) Establish, monitor and review environmental targets and report environmental performance;
- (f) Consistently comply with legal obligations and industry agreements both in letter and spirit;
- (g) Implement an effective environmental management system and continually improve on it;
- (h) Promote environmental responsibility among our employees and business partners;
- (i) Communicate with and involve all interested parties on environmental issues in an open and timely manner; and,
- (j) Support local environmental initiatives and participate in regional collaboration on environmental protection.

Adherence to this policy is the responsibility of all employees of the Company and business partners. The development of environmental policy is the responsibility of the Environmental Steering Committee, which is also the EMT. The implementation of the policy lies with the head of division, sections and all concerned.

*Providing the power to make a difference*
